PROFESSIONAL SUMMARY

I am a motivated undergraduate looking for a Cloud Engineer Internship. I have hands-on experience working with Microsoft Azure, cloud infrastructure, and building cloud-based applications through academic and personal projects. I understand cloud networking, virtualization, storage, identity and access management, and cloud security fundamentals. I am familiar with deploying and managing cloud resources while applying best practices for reliability, scalability, and performance. I enjoy learning new technologies, solving technical problems, and collaborating with others. I am eager to apply my skills, gain industry experience, and grow as a Cloud Engineer.

CORE COMPETENCIES

- | | | |
|-------------------------------------|-----------------------|--------------------|
| • Cloud Computing (Microsoft Azure) | • Python Programming | • REST Development |
| • Java Development | • Database Management | • Git & GitHub |
| • C# & .NET | • React.js & Next.js | • Spring Boot |

EDUCATION

BSc (Hons) in Software Engineering
NSBM Green University

G.C.E. Advanced Level (Physical Science Stream)
Kingswood College | 2020 – 2022

Current GPA: **3.98 / 4.00**

G.C.E. Ordinary Level - **Kingswood College** | 2014 – 2019

CERTIFICATION

Microsoft Certified: Azure Fundamentals (AZ-900)

Microsoft Azure – Demonstrated foundational knowledge of cloud concepts, Azure services, security, privacy, compliance, and Azure pricing and support.

PROJECTS

Job Portal Platform | Full-Stack Cloud Application

Built a production-ready recruitment platform using Node.js, React.js, and Microsoft Azure, featuring JWT-based RBAC authentication, Azure Blob resume storage, Azure SQL integration with Sequelize ORM, automated admin services, and CI/CD deployment pipelines through GitHub Actions. Designed secure, scalable cloud architecture supporting Candidate, HR, and Admin workflows.

AI-Powered Fitness Management System | Microservices Architecture

Developed a scalable fitness management platform using Spring Boot microservices, React.js, and cloud-native technologies. Implemented Keycloak security, API gateway routing, service discovery, asynchronous messaging with RabbitMQ, multi-database architecture, Docker-based deployment, and Google Gemini AI integration for personalized fitness recommendations. [Github](#)

Healthcare ERP System | Full-Stack Monolithic Architecture

Developed a full-scale hospital ERP platform using Spring Boot, Next.js 14, and PostgreSQL with 10 integrated healthcare modules. Implemented JWT-based RBAC authentication, RESTful APIs, Flyway database migrations, TanStack Query state management, and automated workflows for bed management, pharmacy inventory, and billing reconciliation. [Github](#)

Construction Project Management System | Enterprise Full-Stack Application

Built a full-stack construction management platform using Spring Boot, React.js/Angular, and MySQL to manage projects, workers, vehicles, allocations, payments, appointments, and customer workflows. Implemented JWT-based security, RBAC, RESTful APIs, clean architecture patterns, responsive dashboards, and collaborative GitHub development workflows. [Github](#)
